Fontaine® Fifth Wheel
Ultra NT

Rebuild Procedures

• Disassembly
• Assembly
• Adjustments
Dissassembly

Degrease fifth wheel before installing new parts

1. Remove springs and pull handle
Remove secondary lock handle spring (11) and bumper spring (12). Remove pull handle cotter pin (28) and washer (27) then slide out pull handle (26).

2. Remove secondary lock
Unbolt and remove secondary lock (24) from operating handle (38). Discard lock nut and bushing.

3. Remove bumper from operating handle
Unbolt and remove bumper (33) from operating handle (38). Discard lock nut and bushing.

4. Remove operating handle
Unbolt operating handle (38) from pivot mount and remove. Discard lock nut.
Dissassembly

5. Remove timer
Remove timer spring (34) and timer (37).

6. Remove jaw and wedge
Remove jaw (35) and wedge (36).

Fontaine No-Slack® non-genuine parts advisory
The purpose of this notice is to alert Fontaine customers of the potential hazards from using non-genuine components, specifically the movable locking jaw and wedge. Recent reports have revealed the sale, use and failure of these components. Failures are occurring as a result of the locking wedge stud falling out (see photo in red) at an early cycle time which affects the proper opening and closing of the mechanism, and could create a dangerous condition. The non-genuine components are easy to identify by the physical characteristics listed below. The use of any non-genuine components not only creates a potential dangerous condition, it also voids the manufacturer’s warranty. The seller and end user assume any/all responsibility for warranty, property and bodily damage as a result of using non-genuine parts.

Non-genuine parts
• The non-genuine parts come in a white box.
• The non-genuine parts have jaw and wedge studs that are pressed/glued into the forging.

Genuine Fontaine No-Slack® parts
• Genuine Fontaine parts come in a small brown box with Fontaine part number KIT-RPR-6000L clearly printed on a white label (photo of box above).
• Genuine Fontaine parts have the model number forged into the jaw and wedge forging.
• Only Genuine Fontaine parts have “Genuine Fontaine Parts” printed on the box.
Before rebuilding the assembly, check to make sure that there are no cracks in the casting or other components. Also check bracket pin holes to ensure they are not worn oversize (pins should fit snugly). Refer to exploded view of assembly on page 6 to identify item number and parts.

1. Insert jaw and wedge
Always assemble parts around a 2" kingpin or a 2" diameter shaft. Insert jaw (35) first and then the wedge (36) below it. Grease the jaw and wedge on top and bottom.

2. Insert timer
Insert timer (37) and timer spring (34).

3. Insert operating handle
Insert operating handle (38) and bolt (43) to pivot mount on fifth wheel. Use existing bolt (43), washers (41) and hairpin cotter (39). Inspect for wear before using and replace if necessary. Use the new lock nut (40) and bushing (41) that is supplied in the repair kit.

4. Install bumper
Install bumper (33) and bolt (29) to operating handle (38). Use existing bolt (29) and washers (30) (inspect for wear before using and replace if necessary). Use new lock nut (32) and bushing (31) that is supplied in the repair kit. Note orientation of bolt (29). Threads should be facing up. After installing the bumper check to make sure that it can pivot freely.

Adequate lubrication should be used
Assembly

5. Attach the secondary lock
Insert secondary lock (24) and bolt (21) to operating handle (38). Use existing bolt (21) and washers (22) (inspect for wear before using and replace if necessary). Use new lock nut (25) and bushing (23) that is supplied in the repair kit. Note orientation of bolt (21). Thread should be facing down.

6. Attach pull handle
Install pull handle (26). Use existing washer (27) and cotter pin (28). Inspect for wear before using and replace if necessary. Attach new secondary lock (24) and bumper spring (12) that is supplied in the repair kit. Now open and close the wheel to ensure that it works properly. Fifth wheel must be properly lubricated before opening and closing the wheel.

Air cylinder models
Your Ultra NT fifth wheel can easily be converted to an air actuated release model. Order Part No. “KIT-AA-??”. Specify left side (driver’s side) or right side (curb side) release by adding an “L” or “R” after Part #. See more detailed instructions on page 7.

Adjust fifth wheel
Open the fifth wheel, insert a 2” kingpin and close the wheel. Turn the adjustment rod (4) clockwise (inward) until it contacts the end of the locking wedge (36). Close the fifth wheel several times with a standard 2” kingpin tool. With the lock closed, adjust the wedge-stop rod (4) so that the end is 1/4” from the wedge (36). The fifth wheel should operate freely and smoothly without binding or interference.

Air actuated kit (KIT-AA-?? or R)

This kit includes the parts mounted to the fifth wheel. If you are upgrading from manual to air actuated you will also need KIT-AIR-DASH which includes the parts required to complete the in-dash installation.

### Air cylinder installation instructions:

1. Remove fifth wheel from mounting brackets. Cleaning the fifth wheel before installing the kit is recommended.
2. Place the fifth wheel in the upside down position. Make sure that the fifth wheel is placed on a suitable work surface.
3. Remove the old bumper spring (11) and pull handle spring (12) from the fifth wheel. See Diagram 1.
4. Install the exhaust valve (17) into the new cylinder. Make sure valve is oriented as shown. See Diagram 1 for spring locations.
5. Install the new air cylinder (16). Note positions of pin (13) and bolt (20). Orient cylinder as shown in Diagram 2.
6. Install the new bumper spring (12) and pull handle spring (11). See Diagram 1.
7. Reinstall the fifth wheel back on the mounting brackets.
8. Insert the airline supply into the quick disconnect on the exhaust valve.
9. Open and close the fifth wheel using the air cylinder to ensure proper function.
10. Tilt the fifth wheel forward to ensure that the cylinder and/or air supply line does not interfere with another component. (Please see diagram 3)

Note: Valves and airline are available through Fontaine. Order a KIT-AIR-DASH for mounting the pull valve in the dash and plumbing the airline to the cylinder.

### Diagram 1

**Exhaust value (17) orientation**

**Bumper spring (12)**

**Secondary lock (24)**

**Handle spring (11)**

### Diagram 2

**Position air cylinder as shown**

3/8" hex locknut (18) and washer (19)

3/8" Shoulder bolt (20)

Hand-tighten 3/8" shoulder bolt (20) using a torque wrench (torque to 20-28 ft-lbs). Do not over torque!

### Diagram 3

**Top view**

If applicable, remove indicated front rocker limit block to prevent air cylinder damage.
Items needed for rebuild

Remember to exercise extreme caution, follow all stated & customary safety procedures, and be sure to wear safety glasses.

Do not use pneumatic tools. Over-tightening may cause damage.

- ¾” wrench
- ¾” socket wrench
- 1 1/16” wrench
- Pliers
- Flat head screw driver
- Long pry bar
- Test kingpin MSC-712
- Kingpin gauge MSC-GAUGE
- Moly-based lubricant such as Mobilgrease XHP320 or equivalent

Handy tools available from Fontaine Parts Connection

Fontaine offers special tools for your fifth wheel to help your repairs go fast and easy.

- Test kingpin for all Fontaine fifth wheels KIT-ULTRA-KP
- Kingpin gauge MSC-GAUGE

Top plate rebuild kit

No-Slack rebuild kits for ULTRA NT/6000/7000/7000CC top plates
KIT-RPR-6000L (left release) KIT-RPR-6000R (right release)

Above is most common kit. After inspection you may need to optionally order other kits. See schematic on page 6.

Air actuated in-cab release

You can upgrade your Fontaine 6000 or 7000 series fifth wheel from manual to “Air Actuated” in-cab release. Simply order a KIT-AA-6000L (road side release) or KIT-AA-6000R (curb side release). You will also need KIT-AIR-DASH for the parts required to complete the in-dash installation.

Top plate rebuild kit

No-Slack rebuild kits for ULTRA NT/6000/7000/7000CC top plates
KIT-RPR-6000L (left release) KIT-RPR-6000R (right release)

Above is most common kit. After inspection you may need to optionally order other kits. See schematic on page 6.
