The new Fontaine Dual Assist Camera System

- Fontaine Fifth Wheel patent pending innovation lets you watch your trailer couple from the comfort of your cab!
- Two camera system for an incredible view
- On-dash display for driver convenience
- Infrared technology for night vision
- Integrated heating system for cold weather operation
- The system activates automatically when the truck is placed in reverse
- Now it’s easier than ever to make sure your truck and trailer are lined up properly!

We are honored that the Fontaine Dual Assist Camera System is recognized by Heavy Duty Trucking as a top 20 product for the year.

Connect with Confidence

Anything you can do to help remove uncertainty from trailer coupling cuts operating costs and improves the efficiency of your business. Fleet managers know that damaged equipment erodes the bottom line and can put you way behind schedule. That’s why Fontaine® went to work with Velvac® to focus on an innovative solution.

Introducing the Fontaine Dual Assist Camera System. This marvel of technology lets drivers become an eye-witness to trailer coupling from the comfort of their cab. It’s the better, easier, smarter way to couple trailers.*

* Of course, the Fontaine Dual Assist Camera System does not eliminate the requirement that the driver exits the cab and performs a visual inspection of the fifth wheel connection, but it makes the overall process more user-friendly and convenient.

Fontaine has your **backup**

The patent-pending Fontaine Dual Assist Camera mounts to your truck frame and lets you watch your trailer couple from the comfort of your cab. It’s the better, easier, smarter way to couple trailers.

The forward facing and rear facing cameras are protected by a robust aluminum housing. The doors remain closed when the system is not in use and open automatically when the truck is placed in reverse.

On-dash display allows you to view trailer coupling from two perspectives. One camera shows the trailer while backing up. The other camera is focused on the fifth wheel lock to view the actual coupling of the trailer. Infrared technology is employed for night vision capability.

The system makes it easy for drivers to make sure things are lined up properly. Then they can actually see the kingpin enter the throat of the fifth wheel. Takes the guesswork out of the coupling process. Although this system makes trailer coupling easier and more convenient than ever, it does not replace the requirement by law that the driver exits the cab and visually inspects the fifth wheel to ensure a proper connection.
Focused on Fifth Wheels
The Fontaine® Fifth Wheel R&D Center is the largest, best equipped laboratory in the world focused exclusively on fifth wheel technology.
